ABOUT THE COURSE

Stereochemistry is one of the emerging branch of chemistry which deals with three dimensional arrangement of atoms. Using stereochemistry, chemists can work out the relationships between different molecules that are made up from the same atoms. Chemdraw is a leading chemistry drawing software for drawing a molecule structure and finding stereochemistry of the molecule.

COURSE OBJECTIVE

This course will familiarize the students on aspects of chemdraw software and help them to draw molecular structure and finding stereochemistry. Also this course will help the students to study the basics of organic chemistry.

LEARNING OUTCOME

By the end of course students will able to

- Explain basics of organic chemistry
- Drawing structures of molecules using chemdraw
- Formulating simple organic reactions
- Become more interested in organic chemistry
- Designate R&S and D&L configuration to molecule

REQUIREMENT

- Computers with chem draw software
- Molecular models

COURSE SYLLABUS Module I (6 hr)

Nomenclature and structure of organic molecules.

Unique nature of carbon, functional groups, homologues series, classification of

organic compounds- open,closed,cyclicetc, nomenclature of alkanes, alkenes, alkynes and different functional groups, hybridization of hydrocarbons.

Module II (8 hr) Basics of stereochemistry

Introduction to isomerism –chain, position, functional, metamerism, tautomerism, concept of stereoisomerism, cis- trans, Z-E , anti- syn conformations,, configurations and conformations, D&L, R&S configurations,chirality, enantiomers, diastereoisomers.

Module III (6 hr) Basics of reaction mechanism

Introduction, substrate, reactants, reagent, types of reagents, different types of reactions, reaction intermediates.

Module IV (10 hr) Basics and applications of chemdraw

Tools of chemical structures, structural representation of simple chain molecules,structure of fused rings and heterocyclic molecules, configurational representation of simple and double stereo centered chiral compounds, representation of simple organic molecule.

Evaluation and Grading

Active participation and individual participation outside the class are important for the successful completion of the course.The student will have to submit one assignment and pass a written final examination .Assignment shall be for 10 marks,practical examination shall be for 30 marks and written examination shall be for 60 marks.So total 100 marks.The duration for practical examination will be 30 minutes and for written examination two hours.The written examination will have objective and subjective questions.
